

Selenium WebDriver

Selenium WebDriver:
Why, What & When?

The Golden Circle

What

What is Selenium?

Selenium is a UI automation framework to test web applications .

Why

Why Selenium?

Open Source and with market share of about 46.59%, Transparency, Integration with other tools

When

When to use?

Functional , Regression testing

Opensource Browser Automation – Popular Tools

Selenium

Playwright

Cypress

Tool – Usage across world

Selenium

Playwright

Cypress

Puppeteer

#1 – Max Downloads

Getting Popular

Decent Market Share

Developer Tool

Tool – Scripting Languages

Selenium

Core Java,
Python,
C#,
JavaScript,
Ruby,
Perl

Playwright

Core Java,
Python,
C#,
JavaScript

Cypress

JavaScript

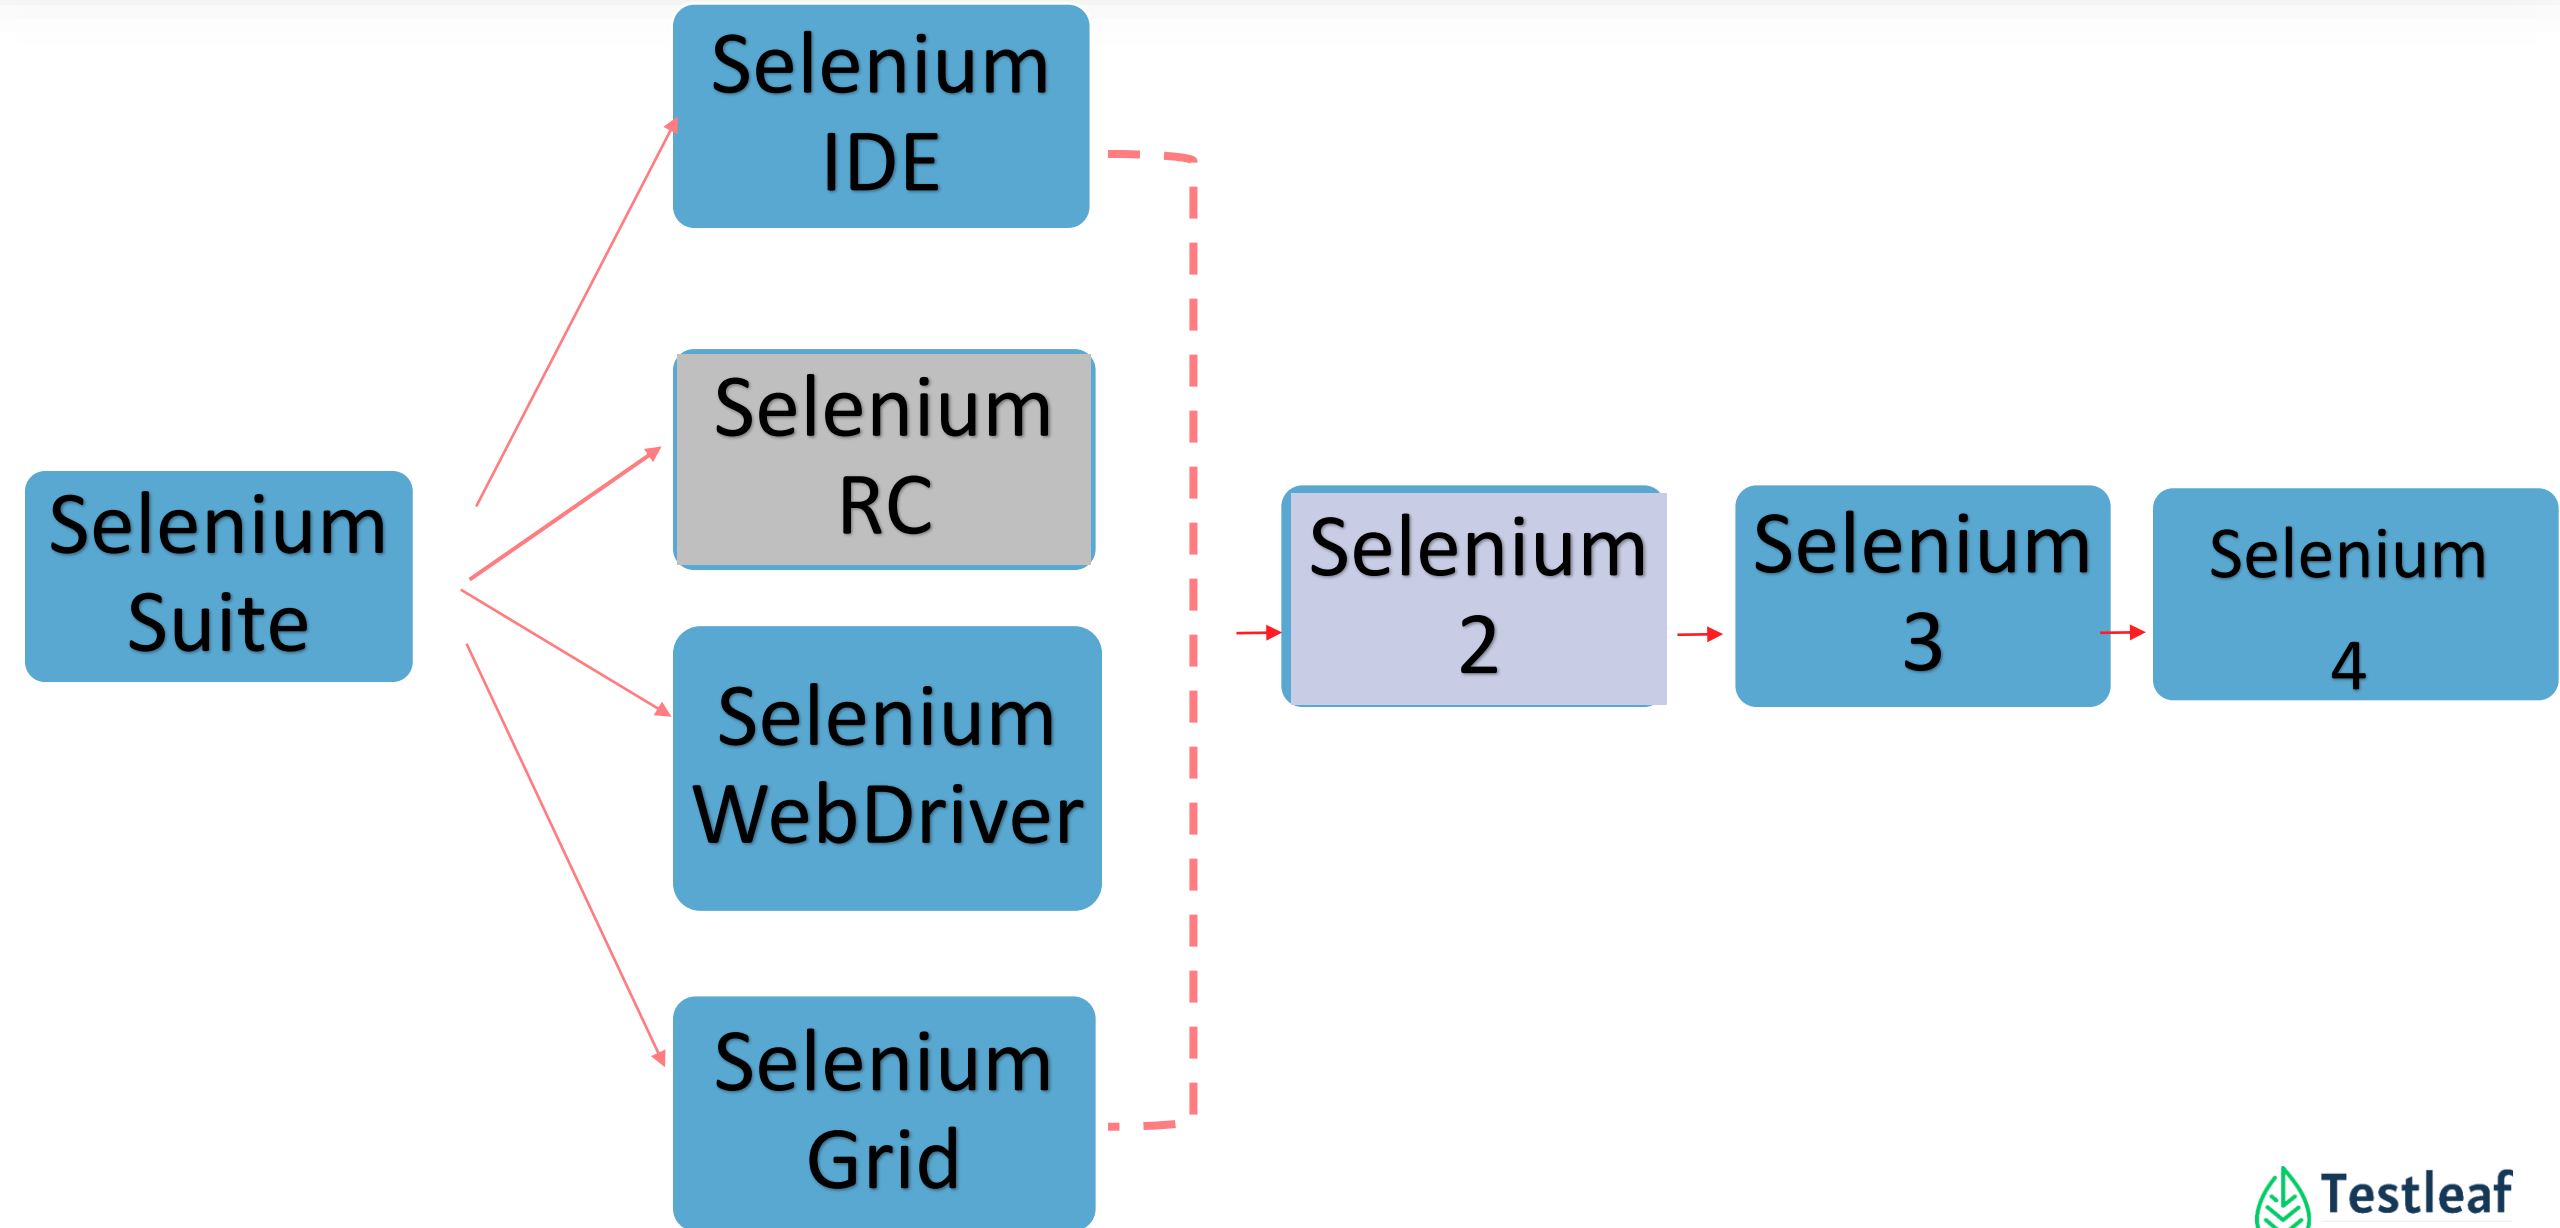

JavaScript

How Selenium emerged?

- 2004 - Jason Huggins was testing an internal application at Thoughtworks.
- That library eventually became Selenium Core, which underlies all the functionality of Selenium Remote Control (RC) and Selenium IDE.
- In 2006, Simon Stewart started work on a project – WebDriver. Google had long been a heavy user of Selenium, but testers had to work around the limitations of the product.
- Simon Stewart, the creator of WebDriver, in a joint email to the WebDriver and Selenium community on August 6, 2009.

Selenium Components

What Selenium can do?

Selenium can talk to any browser

Safari

Apple

Firefox

Mozilla

Chrome

Google

Edge new

Microsoft

Opera

Opera Software

Selenium support multiple OS

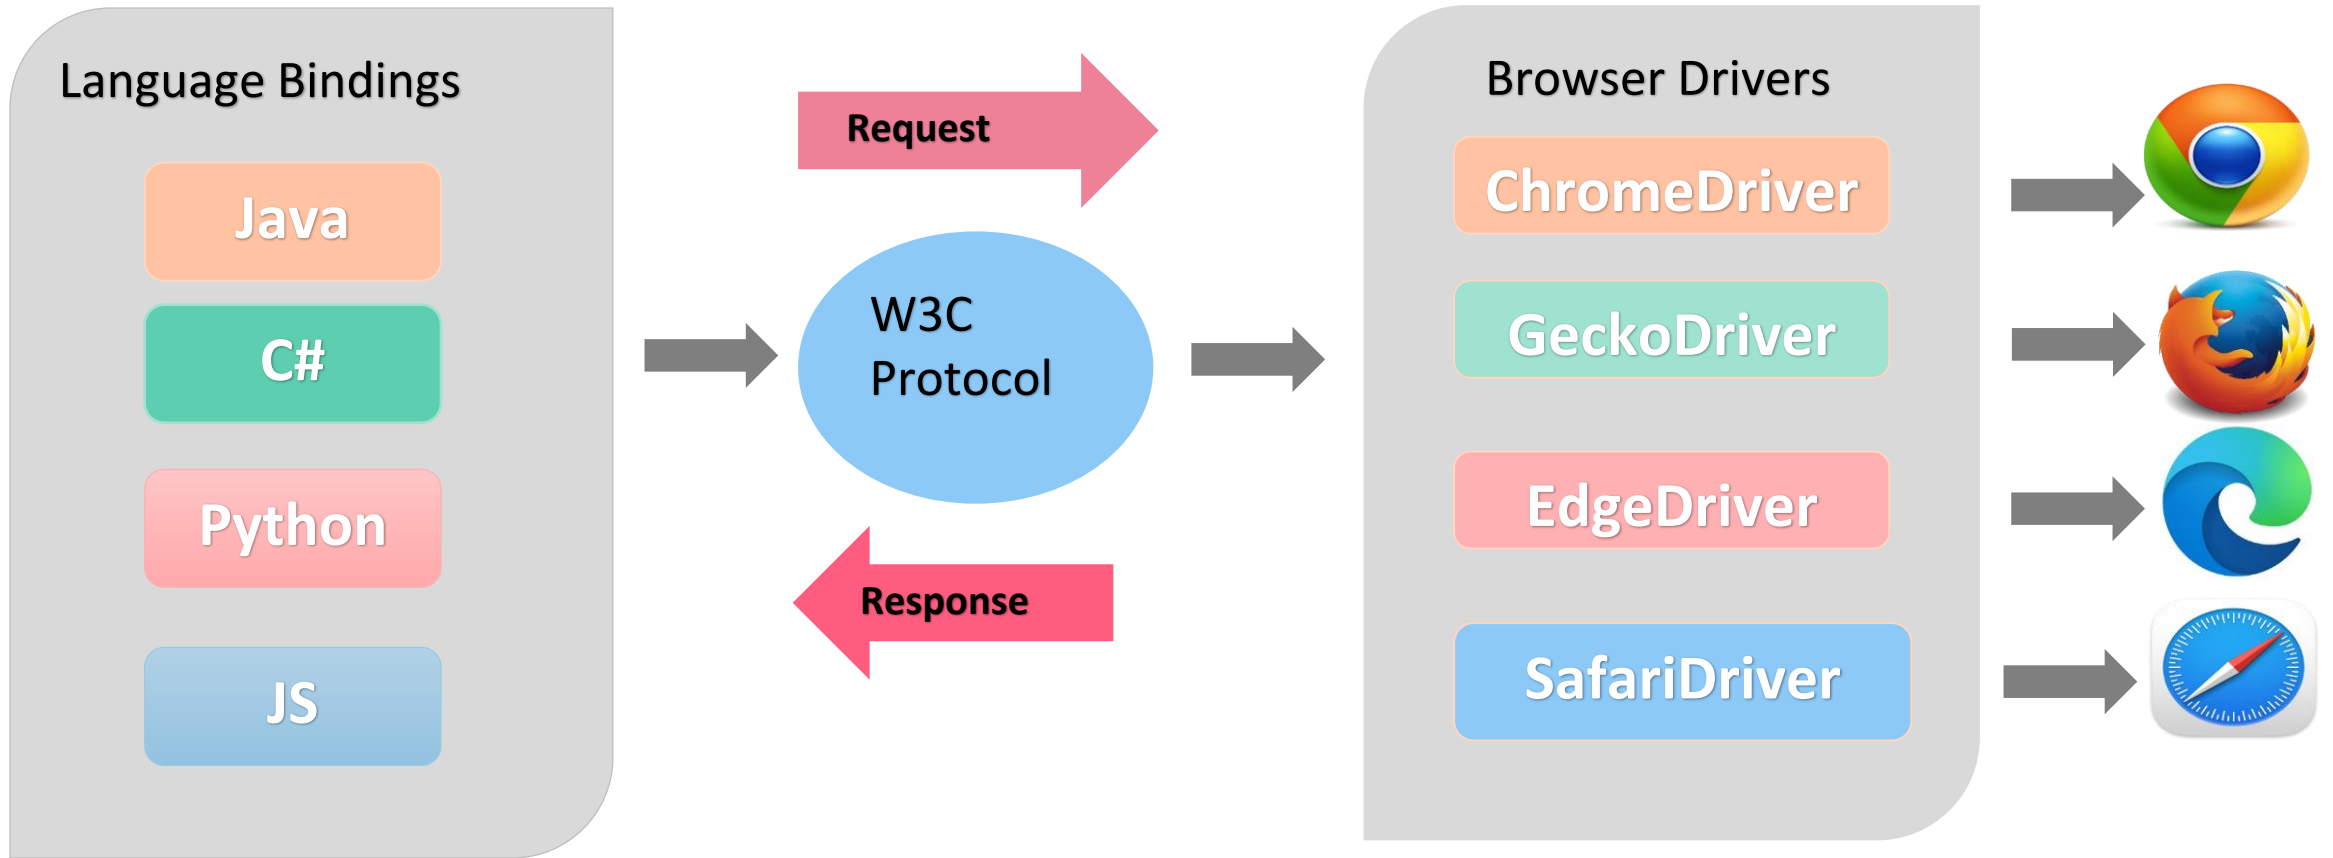

Selenium can work with all programming languages

What Selenium cannot do?

- ❖ Selenium cannot talk to database-requires Java JDBC library
- ❖ Selenium will not automate desktop application- requires java library-Apache Poi
- ❖ Selenium will not automate Mobile application - Appium

How Selenium talks to browser

Pre requisite to launch browser

-Selenium dependency - pom.xml

```
<dependency>  
<groupId>org.seleniumhq.selenium</groupId>  
<artifactId>selenium-java</artifactId>  
<version>4.6.0</version>  
</dependency>
```

pom- project object model

How to launch Application?

Step1 : Setup the driver

Instantiate the browser driver

ChromeDriver driver= new ChromeDriver(); (Chrome Browser)

FirefoxDriver driver=new FirefoxDriver(); (Mozilla Browser)

Step 2: To Load Url

Using get ()

```
driver.get("https://www.google.com/");
```

Summary

- Selenium automates only Web based application
- Selenium communicates through API(browser driver) with the Web browser
- Selenium supports multiple browsers, OS, Programming Language

Classroom Exercise (Breakout)

1. Setup the driver

Instantiate the browser driver

2. Load the Url
